High-Speed Data Acquisition System

Rugged Construction for Field or Lab Applications
The TMX-18 allows you to stack thousands of data captures on the hard drive.

**Precise & Synchronized Data Capture**

**Long Term Trending**

Whether your test runs for 100 milliseconds or 100 hours, the TMX-18 won’t miss a glitch. With its dedicated, 1 TByte hard drive for data capture, the TMX-18 is ideal for long-term trending and high-speed event detection. Each channel uses a separate 16 bit A/D for perfect data synchronization. AstroNova’s powerful BackChannel technology ensures precise synchronization of analog, audio, video and data bus inputs, without relying on Windows® to synchronize data.

**Embedded Scope Captures**

Using the powerful embedded scope capture and intelligent triggering, TMX-18 provides low speed trending while simultaneously monitoring and storing highly sampled time transients or events. TMX-18 will time stamp and embed important data into the trend recording, ensuring all details of critical data.

**Multiple Sample Rates**

Up to four sample rates can be selected per TMX-18 data capture, allowing you to manage file size by assigning higher sample rates to critical signals and lower sample rates to trending signals.

**Triggering**

TMX-18 contains advanced triggering capabilities that start and/or stop a recording based on changes in the input signals. The circular data buffer of the TMX-18 allows you to set and record large amounts of pre-trigger data. Window, level and slew triggering allows you to set up trigger conditions precisely for your application, while logical AND and OR triggering ensure that you trigger only on events that are important to you.

**Dedicated Hard Drive**

Unlike Windows-based systems, the TMX-18 features a 1 TByte hard drive dedicated solely for capturing data. Removable drives allows data to be easily transferred and stored securely, leaving no proprietary data on the machine.

The Easiest to Use Data Acquisition Systems on the Market

AstroNova’s TMX-18 is simple. Featuring a high resolution 17” touch screen display, as well as pre-defined set up options, makes test setup a breeze! With the TMX-18, you will be up and running in no time! With the TMX-18, you can even create and switch among multiple setup configurations.
DISPLAY
Real-Time Viewing & Setup
The TMX-18 displays a large 17” screen which allowing you to view data in real-time and post capture. Operation of the TMX-18 is quick and easy with intuitive touch-screen display, interface icons and menus for straightforward setup and operation. The TMX-18 is easily customized it to fit your exact needs.

Meters/Gauges/Bar Graphs
The advanced channel meters offer a variety of options to visually indicate channel activity. Your data can be viewed numerically or in other visual representations such as a gauge or horizontal/vertical bar, needle and LED readouts.

Cursor Measurements
Placing cursors on the touch screen allows for quick measurements of Time, Sample Point, Average, Min/Max & Peak-Peak Slope, RMS, Sum, Sum of Squares, Variance, Standard Deviation & Area.

Scope Mode
Scope mode acts like a digital storage oscilloscope, providing high time-base resolution for viewing high-frequency signals. Scope mode is useful for timing and synchronization analysis, transient capture, and high-speed testing. It can be used while continuously capturing data and monitoring signals on the display.

Alarms
Alarms provide a visual indicator when signals extend below or above specified boundaries. These boundaries are defined by setting up low and high alarm levels. The utility / DIO port provides an alarm output pin that can be used to trigger an external process when alarm conditions for selected signals occur.

Automation & Stimulation
Test stimulation and automation with the analog outputs, digital outputs, relays and counters (found on the DIOC-16) are possible when coupled with a background program running. Quick creation of temporary or unique test cells and even report files are available with programs such as script files up to third party graphical programming packages.

Compressed Capture
Compressed Capture for long-term recording of data using a min/max method keeps the file size small. Fully recording the input signal amplitude at the full bandwidth (glitch capture), Compressed Capture has real-time digitizing sample rates up to 800 kHz (input module dependent) and selectable capture rates for a wide variety of applications. This can be combined with Scope capture for transient signals. Glitches are clearly seen when reviewing the data.
REVIEW & POST PROCESSING

QuickLook
The innovative QuickLook feature calculates compression and expansion factors while recording data, allowing you to review GBytes of data in seconds and scan through large data files quickly.

LookBack
The TMX-18’s unique LookBack feature allows you to review data during capture and allows you to transfer previously recorded data without interruption to the active trend capture.

Exporting Data
The TMX-18 offers a number of ways to archive and export captured data. Data can be exported in our packed binary format, minimizing file size, or a generic ASCII format, which is compatible with most analysis packages. The TMX-18 provides eight USB 2.0 ports with an integral 1000BaseT Ethernet port. Simply connect the TMX-18 to a network and upload the data of interest. The Ethernet connection can also control the TMX from a remote location using a suite of host commands.

SOFTWARE

AstroVIEW® X
Each TMX-18 includes free AstroVIEW X PC based data review and analysis program. AstroVIEW X runs on any Windows PC and lets you upload and review data captured on the recorder. AstroVIEW X has built-in analysis and converts data into ASCII, Excel®, Mathcad®, DADiSP® and other formats.

TMX-18 Offline
TMX-18 Offline software, gives you the ability to create setups as well as review data on your PC. Developed for Windows based PCs, TMX-18 Offline software is powerful, easy to use and provides all the tools necessary to quickly configure the system, transfer files, review and analyze your data.

HARDWARE CONFIGURATION
The TMX-18 is designed to go anywhere your testing sends you. The tough, MIL-STD-810 tested industrial grade package gives you the freedom to bring it onto the production floor or out to a remote site.

Why Buy from AstroNova
- The TMX-18 is manufactured and tested in the USA.
- Our 24/7 customer service is rated #1 in the Test & Measurement industry by our customers.
- AstroNova has been in the data recording business for over 40 years and is still going strong.
- Supported in the USA as well as around the world.

TMX SPECIFICATIONS

18-CHANNEL CHASSIS with 3 UNIV-6 Universal Isolated Voltage Modules

- Maximum Analog Modules: 3
- Maximum Analog Waveforms: 18
- Event Inputs (TTL): 16
- Derived Channels: +, -, x, ÷, Exponential, Sin, Cos, Tan, Asin, Acos, Atan, Exp, √, Absolute Value

Data Acquisition Recording
- Operational Modes: Scope, Review, Real-time (strip-chart)
- Recording Method: Internal removable 1 TByte SATA disk drive
- Time Stamp: Time and date automatically saved with data
- Trigger Point: Amount of pre and post trigger is user adjustable
- Filtering: Low pass, high pass, band pass, band stop, RMS, integration & differentiation

Color Display
- Type: Active matrix color LCD (TFT)
- Viewing Area: 17” (43.2 cm) diagonal
- Resolution: 1280 x 1024
- Touch: Full screen, resistive

Compliance/Environmental
- Operating Temp: 32 to 104 °F (0 to 40 °C)
- Operating Humidity: 10 % to 90 % non condensing
- Shock: MIL-STD-810F Method 516.5, Procedure I
- Vibration: MIL-STD-810F Method 514.5, Procedure I
- Physical
  - Enclosure: Aluminum, with armored end caps
  - Dimensions: 14.5” (36.8 cm) H x 19” (48.3 cm) W x 7.5” (19.1 cm) D (without handle)
- Weight (including 3 modules): 37 lbs (15.78 kg)

Interface
- Ethernet: 1000BaseT
- VGA: For displaying data on an external monitor
- USB 2.0 (8 ports/unit): For external peripherals and file export
- Expansion Port: For connection of optional TMX-E

System Power
- Input Voltage Range: 100 to 264 VAC or 24 VDC at 11 A
- Frequency Range: 47 Hz to 63 Hz

INPUT MODULE SPECIFICATIONS

UNIV-6 Universal Isolated Voltage Module with DC Bridge
- Channels (per module): 6
- Maximum Sample Rate/Ch: 800 kHz (400 kHz with TMX-E)
- Isolation: 250 Vrms or DC, Cat II
- Maximum Bandwidth: Up to 100 kHz
- Input Type: Isolated, AC/DC coupled
- Specified Ranges: 200 mVFS to 800 VFS

TMX OPTIONS – ADVANCED

TMX-VA Video/Audio Acquisition
- Analog Input Type/Connector: Composite/BNC
- Supported Video Formats: NTSC, PAL
- NTSC Capture Rate: 30 fps (frames per second)
- PAL Capture Rate: 25 fps (frames per second)
- Audio Capture Rate: Up to 44.1 kHz

TMX-HSV High Speed Video
- Maximum Frame Rate: 1000 fps
- Maximum Storage: 2 GBytes

REVIEW & POST PROCESSING

QuickLook
The innovative QuickLook feature calculates compression and expansion factors while recording data, allowing you to review GBytes of data in seconds and scan through large data files quickly.
